

# **Fulldive VR Celebrates Breakthrough Success of Virtual Reality App With Announcement They are Seeking Series A Investment**

*The brainchild of two Berkeley University students with a clear vision, the virtual reality mobile app Fulldive VR has blown away even the highest expectations, recently breaking the 1 million download mark without accepting any outside investors. Celebrating this success, the company recently announced they will be opening up for first time Series A investments to better execute their mission.*

July 3, 2016

When experts were debating who would come out on top of the clash between different virtual reality apps, one name was consistently neglected, until its release and users had to experience it first hand. Enter Fulldive VR, a remarkable virtual reality app designed by two Berkeley University students Ed Ow and Yosen Utomo and self-funded into existence without accepting Venture Capital investments. Fulldive recently celebrated crossing the 1 million user download mark and announced they will be seeking Series A funding to better respond to new business realities. Not surprisingly, Venture Capital interest is very high.

“We are as blown away by the success of Fulldive VR as anyone to be honest,” commented a spokesperson from the company. “The enthusiasm that's greeted Fulldive VR – over a million downloads, the #1 VR app at the Google Play store and endless positive press and reviews – it's all a dream come true. Now that we have proven ourselves successful, we are going to bring in some investors to better achieve our vision for Fulldive VR's future. It was the plan all along, to not accept funding until we had a proven product.”

According to the company, Fulldive VR allows users to watch well over a million 360 degree videos and the number is rising every day. In addition the innovative app features an internet browser, photo/video gallery, camera and access to a first class VR market. The attention paid to detail by the Fulldive VR team is quite clear to insiders from the tech world, making it all the more remarkable for the app to be in the spot in its category in the face of competition by companies with incredible resources.

Fulldive VR has not just won praise from everyday users, but it's developers have also left a lasting impression on the people who were able to witness their passion for virtual reality first hand.

Charles Huang the founder of guitar hero and mentor of Fulldive VR, recently said, “It is amazing how they bootstrapped and created a next generation app that currently is performing so well in the VR sector - when there is so many giant competitors out there.”

Which Venture Capital investors will come aboard the project with Series A fund investments is a question that's building much anticipation. Full details, when available, will likely be announced on the Fulldive VR website and other tech media sources.

For more information on the app and the company be sure to visit <http://fulldive.com>.
